To whom it may concern,

I have known Daniel Zhou from his internship with our company during the past June Holiday, where he served as an Assistant Content Creator.

Daniel was immediately involved in evaluating and refining the Artificial Intelligence courseware we developed for youths. He played an instrumental role in developing sample codes for AI with Python's NumPy, Pandas, Sklearn and Keras libraries. He was involved in a project to accurately perform Facial and Image Recognition with utilising OpenVino inference engine and Neural Compute Stick. He developed a functional AI software for pulling JSON data from a weather forecast API in his gardening watering project without aid. Daniel also helped out in a hackathon we organised for youths, and guided peers older than him to the finals.

Daniel has shown the kind of competence necessary for success in the infocomm sector. He has extraordinary learning ability and is able to pick up complex concepts and skills swiftly with ease. Daniel is resourceful, able to source for the important essences within masses of information from the internet. Daniel is agile and meticulous in his pursuits, always considering alternatives while remaining focused on the potential user experience in mind. Daniel has shown initiative in constantly exposing himself to current and relevant technologies. Additionally, he has learnt a wide array of thinking tools from Sustainable Living Lab, including User-Centred Design and Futures Thinking. We hope that it would help him to be a well-rounded individual suitable for the volatile and uncertain future.

If you seek a talented individual, who is able to work independently on projects, I would recommend Daniel to you. If you have any further questions with regard to his background or qualifications, please do not hesitate to email me.

Sincerely,

**Arvin**
